> what do you mean by testing? this is a bug. it has existed for years and years yeah, if you like, you could raise the issue here if you feel it isn't addressed, just don't say 'This bug has been fixed since [xyz],' as that will make the bug closed

deltahorizonlowpc: your answer was to use the external driver right? i said yes deltahorizonlowpc: driver version number? i told you that already. i am working on a workaround to allow the gui to choose a driver to use deltahorizonlowpc: yeah did you update the driver version? it was fine before. and the problem is also present in various drivers. in your case that works fine right? deltahorizonlowpc: sure, dont show me a bug report to get a proper answer, ask in here on your issue you are the one who is not understanding something deltahorizonlowpc: lets play this game properly my answer is to use a driver that is not in the repo. that is my answer to your question about what driver I am using I don't think you understand. you asked me a question and I answered it. deltahorizonlowpc: can you start from the beginning mate, and ask a very specific question? a question has an answer, an answer has a question. it is not a question. deltahorizonlowpc: you did answer it if the answer is to use a driver that is not in the repo then that is not a question delt 82157476af
